The SERA2 Program is utilizing the Centers for Disease Control and Prevention's (CDC) Social Vulnerability Index (SVI) which evaluates 15 social factors grouped by socioeconomic status, household composition and disability, minority status and language, and housing type and transportation to calculate the social vulnerability score to identify communities disproportionately impacted by COVID-19.

The table shows the top disbursement zip codes for both city and county levels. The bars represent the number of applications disbursed, with colors indicating whether there was a disparate impact or not. The data indicates a higher concentration of disbursements in certain zip codes, with a notable disparity in certain areas.

While the specific numbers are not detailed in the text, the graphs provide a visual representation of the distribution and impact within the identified areas.
I’m a veteran that doesn't have all my benefits and I've been battling with PTSD and other mental disabilities the program help to keep me from being homeless. ~ Tenant
