The SERA2 Program is utilizing the Centers for Disease Control and Prevention's (CDC) Social Vulnerability Index (SVI) which evaluates 15 social factors grouped by socioeconomic status, household composition and disability, minority status and language, and housing type and transportation to calculate the social vulnerability score to identify communities disproportionately impacted by COVID-19.
"This program is amazing! I would definitely be homeless with my three children if it wasn't for this program. The economy has made it extremely difficult to pay rent as a single parent. I am very grateful and thankful for this program. Thank you for all you do to help those in need." ~ Tenant
